#### WORK EXPERIENCE

Amgen Inc.
Scientist - Modeling & Simulations

May 2021 – present Thousand Oaks, CA

- · Developed Pharmacokinetics/Pharmacodynamics/Cox hazard regression models for Phase I cancer clinical trials of AMG160 to treat a metastatic castration-resistant prostate cancer (mCRPC).
- · Researched machine learning and deep neural network models to fit single dose data for subsequent simulation of multiple dosing scenarios.

## Novartis International AG. Biostatistics Summer Intern

May 2020 – Aug 2020 East Hanover, NJ

· Developed a Bayesian linear mixed effect model for patients who have wet age-related macular degeneration to predict best-corrected visual acuity over the maintenance phase and suggest a personalized dose regimen. The proposed model has been trained by actual patients' data from HAWK and HARRIER studies (Number of patients is around 1,800 patients).; [Abstract]

## EMD Serono Inc. Merck KGaA. Pharmacometrics Summer Intern

May 2019 – Aug 2019 Billerica, MA

· Developed a Bayesian adaptive clinical trial design in Phase I cancer clinical trials, which aimed at utilizing grade information from the Common Toxicity Criteria for Adverse Events provided by the National Cancer Institute.; [Abstract]; [Poster]

# Texas A&M University. Graduate Research/Teaching Assistant

Aug 2016 – May 2021 College Station, TX

· Researched on applications and developments of various statistical models (e.g. non-linear mixed effect model, nonparametric/semiparametric longitudinal model, clustering analysis, classification, hierarchical Poisson model, etc) to various industrial problems arising from biomedical, petroleum, wind energy industries, and COVID-19 outbreak.
